

The REST API is now versioned. For more information, see "[About API versioning](#)."

# Repositories

Use the REST API to manage repositories on GitHub.

## List organization repositories

✓ Works with [GitHub Apps](#)

Lists repositories for the specified organization.

**Note:** In order to see the `security_and_analysis` block for a repository you must have admin permissions for the repository or be an owner or security manager for the organization that owns the repository. For more information, see "[Managing security managers in your organization](#)."

### Parameters for "List organization repositories"

#### Headers

**accept** string

Setting to `application/vnd.github+json` is recommended.

#### Path parameters

**org** string **Required**

The organization name. The name is not case sensitive.

## Query parameters

**type** string

Specifies the types of repositories you want returned.

Default: `all`

Can be one of: `all` , `public` , `private` , `forks` , `sources` , `member`

**sort** string

The property to sort the results by.

Default: `created`

Can be one of: `created` , `updated` , `pushed` , `full_name`

**direction** string

The order to sort by. Default: `asc` when using `full_name` , otherwise `desc` .

Can be one of: `asc` , `desc`

**per\_page** integer

The number of results per page (max 100).

Default: `30`

**page** integer

Page number of the results to fetch.

Default: `1`

## Create an organization repository

✓ Works with [GitHub Apps](#)

Creates a new repository in the specified organization. The authenticated user must be a member of the organization.

### OAuth scope requirements

When using [OAuth](#), authorizations must include:

- `public_repo` scope or `repo` scope to create a public repository
- `repo` scope to create a private repository

## Parameters for "Create an organization repository"

### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

### Path parameters

---

**org** string **Required**

The organization name. The name is not case sensitive.

### Body parameters

---

**name** string **Required**

The name of the repository.

---

**description** string

A short description of the repository.

---

**homepage** string

A URL with more information about the repository.

---

**private** boolean

Whether the repository is private.

Default: `false`

---

**visibility** string

The visibility of the repository.

Can be one of: `public` , `private`

---

**has\_issues** boolean

Either `true` to enable issues for this repository or `false` to disable them.

Default: `true`

**has\_projects** boolean

Either `true` to enable projects for this repository or `false` to disable them. **Note:** If you're creating a repository in an organization that has disabled repository projects, the default is `false`, and if you pass `true`, the API returns an error.

Default: `true`

---

**has\_wiki** boolean

Either `true` to enable the wiki for this repository or `false` to disable it.

Default: `true`

---

**has\_downloads** boolean

Whether downloads are enabled.

Default: `true`

---

**is\_template** boolean

Either `true` to make this repo available as a template repository or `false` to prevent it.

Default: `false`

---

**team\_id** integer

The id of the team that will be granted access to this repository. This is only valid when creating a repository in an organization.

---

**auto\_init** boolean

Pass `true` to create an initial commit with empty README.

Default: `false`

---

**gitignore\_template** string

Desired language or platform [.gitignore template](#) to apply. Use the name of the template without the extension. For example, "Haskell".

---

**license\_template** string

Choose an [open source license template](#) that best suits your needs, and then use the [license keyword](#) as the `license_template` string. For example, "mit" or "mpl-2.0".

**allow\_squash\_merge** boolean

Either `true` to allow squash-merging pull requests, or `false` to prevent squash-merging.

Default: `true`

---

**allow\_merge\_commit** boolean

Either `true` to allow merging pull requests with a merge commit, or `false` to prevent merging pull requests with merge commits.

Default: `true`

---

**allow\_rebase\_merge** boolean

Either `true` to allow rebase-merging pull requests, or `false` to prevent rebase-merging.

Default: `true`

---

**allow\_auto\_merge** boolean

Either `true` to allow auto-merge on pull requests, or `false` to disallow auto-merge.

Default: `false`

---

**delete\_branch\_on\_merge** boolean

Either `true` to allow automatically deleting head branches when pull requests are merged, or `false` to prevent automatic deletion. **The authenticated user must be an organization owner to set this property to `true`.**

Default: `false`

---

**use\_squash\_pr\_title\_as\_default** boolean

Either `true` to allow squash-merge commits to use pull request title, or `false` to use commit message.

**\*\*This property has been deprecated. Please use `squash_merge_commit_title` instead.**

Default: `false`

---

**squash\_merge\_commit\_title** string

The default value for a squash merge commit title:

- `PR_TITLE` - default to the pull request's title.
- `COMMIT_OR_PR_TITLE` - default to the commit's title (if only one commit) or the pull request's title (when more than one commit).

Can be one of: `PR_TITLE` , `COMMIT_OR_PR_TITLE`

---

**squash\_merge\_commit\_message** string

The default value for a squash merge commit message:

- `PR_BODY` - default to the pull request's body.
- `COMMIT_MESSAGES` - default to the branch's commit messages.
- `BLANK` - default to a blank commit message.

Can be one of: `PR_BODY` , `COMMIT_MESSAGES` , `BLANK`

---

**merge\_commit\_title** string

The default value for a merge commit title.

- `PR_TITLE` - default to the pull request's title.
- `MERGE_MESSAGE` - default to the classic title for a merge message (e.g., Merge pull request #123 from branch-name).

Can be one of: `PR_TITLE` , `MERGE_MESSAGE`

---

**merge\_commit\_message** string

The default value for a merge commit message.

- `PR_TITLE` - default to the pull request's title.
- `PR_BODY` - default to the pull request's body.
- `BLANK` - default to a blank commit message.

Can be one of: `PR_BODY` , `PR_TITLE` , `BLANK`

---

**custom\_properties** object

The custom properties for the new repository. The keys are the custom property names, and the values are the corresponding custom property values.

## Get a repository

✓ Works with [GitHub Apps](#)

The `parent` and `source` objects are present when the repository is a fork. `parent` is the repository this repository was forked from, `source` is the ultimate source for the network.

**Note:** In order to see the `security_and_analysis` block for a repository you must have admin permissions for the repository or be an owner or security manager for the organization that owns the repository. For more information, see "[Managing security managers in your organization](#)."

### Parameters for "Get a repository"

## Headers

**accept** string

Setting to `application/vnd.github+json` is recommended.

## Path parameters

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

## HTTP response status codes for "Get a repository"

Status code	Description

## Update a repository

---

✓ Works with [GitHub Apps](#)

**Note:** To edit a repository's topics, use the [Replace all repository topics](#) endpoint.

### Parameters for "Update a repository"

#### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

#### Path parameters

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

---

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

---

### Body parameters

---

**name** string

The name of the repository.

---

**description** string

A short description of the repository.

---

**homepage** string

A URL with more information about the repository.

---

**private** boolean

Either `true` to make the repository private or `false` to make it public. Default: `false`.

**Note:** You will get a `422` error if the organization restricts [changing repository visibility](#) to organization owners and a non-owner tries to change the value of `private`.

Default: `false`

---

**visibility** string

The visibility of the repository.

Can be one of: `public`, `private`

---

**security\_and\_analysis** object or null

Specify which security and analysis features to enable or disable for the repository.

To use this parameter, you must have admin permissions for the repository or be an owner or security manager for the organization that owns the repository. For more information, see "[Managing security managers in your organization](#)."

For example, to enable GitHub Advanced Security, use this data in the body of the `PATCH` request: `{ "security_and_analysis": { "advanced_security": { "status": "enabled" } } }`.

You can check which security and analysis features are currently enabled by using a `GET /repos/{owner}/{repo}` request.

► Properties of `security_and_analysis`

---

**has\_issues** `boolean`

Either `true` to enable issues for this repository or `false` to disable them.

Default: `true`

---

**has\_projects** `boolean`

Either `true` to enable projects for this repository or `false` to disable them. **Note:** If you're creating a repository in an organization that has disabled repository projects, the default is `false`, and if you pass `true`, the API returns an error.

Default: `true`

---

**has\_wiki** `boolean`

Either `true` to enable the wiki for this repository or `false` to disable it.

Default: `true`

---

**is\_template** `boolean`

Either `true` to make this repo available as a template repository or `false` to prevent it.

Default: `false`

---

**default\_branch** `string`

Updates the default branch for this repository.

---

**allow\_squash\_merge** `boolean`

Either `true` to allow squash-merging pull requests, or `false` to prevent squash-merging.

Default: `true`

---

**allow\_merge\_commit** `boolean`

Either `true` to allow merging pull requests with a merge commit, or `false` to prevent merging pull requests with merge commits.

Default: `true`

---

**allow\_rebase\_merge** `boolean`

Either `true` to allow rebase-merging pull requests, or `false` to prevent rebase-merging.

Default: `true`

---

**allow\_auto\_merge** boolean

Either `true` to allow auto-merge on pull requests, or `false` to disallow auto-merge.

Default: `false`

---

**delete\_branch\_on\_merge** boolean

Either `true` to allow automatically deleting head branches when pull requests are merged, or `false` to prevent automatic deletion.

Default: `false`

---

**allow\_update\_branch** boolean

Either `true` to always allow a pull request head branch that is behind its base branch to be updated even if it is not required to be up to date before merging, or `false` otherwise.

Default: `false`

---

**use\_squash\_pr\_title\_as\_default** boolean

Either `true` to allow squash-merge commits to use pull request title, or `false` to use commit message.

**\*\*This property has been deprecated. Please use `squash_merge_commit_title` instead.**

Default: `false`

---

**squash\_merge\_commit\_title** string

The default value for a squash merge commit title:

- `PR_TITLE` - default to the pull request's title.
- `COMMIT_OR_PR_TITLE` - default to the commit's title (if only one commit) or the pull request's title (when more than one commit).

Can be one of: `PR_TITLE` , `COMMIT_OR_PR_TITLE`

---

**squash\_merge\_commit\_message** string

The default value for a squash merge commit message:

- `PR_BODY` - default to the pull request's body.
- `COMMIT_MESSAGES` - default to the branch's commit messages.
- `BLANK` - default to a blank commit message.

Can be one of: `PR_BODY` , `COMMIT_MESSAGES` , `BLANK`

---

**merge\_commit\_title** string

The default value for a merge commit title.

- `PR_TITLE` - default to the pull request's title.

- `MERGE_MESSAGE` - default to the classic title for a merge message (e.g., Merge pull request #123 from branch-name).

Can be one of: `PR_TITLE` , `MERGE_MESSAGE`

---

**merge\_commit\_message** string

The default value for a merge commit message.

- `PR_TITLE` - default to the pull request's title.
- `PR_BODY` - default to the pull request's body.
- `BLANK` - default to a blank commit message.

Can be one of: `PR_BODY` , `PR_TITLE` , `BLANK`

---

**archived** boolean

Whether to archive this repository. `false` will unarchive a previously archived repository.

Default: `false`

---

**allow\_forking** boolean

Either `true` to allow private forks, or `false` to prevent private forks.

Default: `false`

---

**web\_commit\_signoff\_required** boolean

Either `true` to require contributors to sign off on web-based commits, or `false` to not require contributors to sign off on web-based commits.

Default: `false`

## Delete a repository

✓ Works with [GitHub Apps](#)

Deleting a repository requires admin access. If OAuth is used, the `delete_repo` scope is required.

If an organization owner has configured the organization to prevent members from deleting organization-owned repositories, you will get a `403 Forbidden` response.

## Parameters for "Delete a repository"

### Headers

**accept** string

Setting to `application/vnd.github+json` is recommended.

### Path parameters

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

## HTTP response status codes for "Delete a repository"

Status code	Description
-------------	-------------

204	No Content
-----	------------

307	Temporary Redirect
-----	--------------------

403	If an organization owner has configured the organization to prevent members from deleting organization-owned repositories, a member will get this response:
-----	---

404	Resource not found
-----	--------------------

## Code samples for "Delete a repository"

```
DELETE /repos/{owner}/{repo}
```

cURL

JavaScript

GitHub CLI

```
curl -L \  
  -X DELETE \  
  -H "Accept: application/vnd.github+json" \  
  -H "Authorization: Bearer <YOUR-TOKEN>" \  
  https://api.github.com/repos/{owner}/{repo}
```

```

```

## Response

Status: 204

# List repository activities

---

✓ Works with [GitHub Apps](#)

Lists a detailed history of changes to a repository, such as pushes, merges, force pushes, and branch changes, and associates these changes with commits and users.

For more information about viewing repository activity, see "[Viewing activity and data for your repository](#)."

## Parameters for "List repository activities"

### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

### Path parameters

---

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

### Query parameters

**direction** string

The direction to sort the results by.

Default: desc

Can be one of: asc , desc

---

**per\_page** integer

The number of results per page (max 100).

Default: 30

---

**before** string

A cursor, as given in the [Link header](#). If specified, the query only searches for results before this cursor.

---

**after** string

A cursor, as given in the [Link header](#). If specified, the query only searches for results after this cursor.

---

**ref** string

The Git reference for the activities you want to list.

The `ref` for a branch can be formatted either as `refs/heads/BRANCH_NAME` or `BRANCH_NAME`, where `BRANCH_NAME` is the name of your branch.

---

**actor** string

The GitHub username to use to filter by the actor who performed the activity.

---

**time\_period** string

The time period to filter by.

For example, `day` will filter for activity that occurred in the past 24 hours, and `week` will filter for activity that occurred in the past 7 days (168 hours).

Can be one of: day , week , month , quarter , year

---

**activity\_type** string

The activity type to filter by.

For example, you can choose to filter by "force\_push", to see all force pushes to the repository.

Can be one of: push , force\_push , branch\_creation , branch\_deletion , pr\_merge , merge\_queue\_merge

---

## List CODEOWNERS errors

---

✓ Works with [GitHub Apps](#)

List any syntax errors that are detected in the CODEOWNERS file.

For more information about the correct CODEOWNERS syntax, see "[About code owners](#)."

### Parameters for "List CODEOWNERS errors"

#### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

#### Path parameters

---

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

#### Query parameters

---

**ref** string

A branch, tag or commit name used to determine which version of the CODEOWNERS file to use.

Default: the repository's default branch (e.g. `main` )

## HTTP response status codes for "List CODEOWNERS errors"

## List repository contributors

---

✔ Works with [GitHub Apps](#)

Lists contributors to the specified repository and sorts them by the number of commits per contributor in descending order. This endpoint may return information that is a few hours old because the GitHub REST API caches contributor data to improve performance.

GitHub identifies contributors by author email address. This endpoint groups contribution counts by GitHub user, which includes all associated email addresses. To improve performance, only the first 500 author email addresses in the repository link to GitHub users. The rest will appear as anonymous contributors without associated GitHub user information.

### Parameters for "List repository contributors"

#### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

#### Path parameters

---

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

---

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

#### Query parameters

**anon** string

Set to `1` or `true` to include anonymous contributors in results.

**per\_page** integer

The number of results per page (max 100).

Default: `30`

**page** integer

Page number of the results to fetch.

Default: `1`

## HTTP response status codes for "List repository contributors"

## Create a repository dispatch event

✓ Works with [GitHub Apps](#)

You can use this endpoint to trigger a webhook event called `repository_dispatch` when you want activity that happens outside of GitHub to trigger a GitHub Actions workflow or GitHub App webhook. You must configure your GitHub Actions workflow or GitHub App to run when the `repository_dispatch` event occurs. For an example `repository_dispatch` webhook payload, see "[RepositoryDispatchEvent](#)."

The `client_payload` parameter is available for any extra information that your workflow might need. This parameter is a JSON payload that will be passed on when the webhook event is dispatched. For example, the `client_payload` can include a message that a user would like to send using a GitHub Actions workflow. Or the `client_payload` can be used as a test to debug your workflow.

This endpoint requires write access to the repository by providing either:

- Personal access tokens with `repo` scope. For more information, see "[Creating a](#)

[personal access token for the command line](#)" in the GitHub Help documentation.

- GitHub Apps with both `metadata:read` and `contents:read&write` permissions.

This input example shows how you can use the `client_payload` as a test to debug your workflow.

## Parameters for "Create a repository dispatch event"

### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

### Path parameters

---

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

---

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

---

### Body parameters

---

**event\_type** string **Required**

A custom webhook event name. Must be 100 characters or fewer.

---

**client\_payload** object

JSON payload with extra information about the webhook event that your action or workflow may use. The maximum number of top-level properties is 10.

## List repository teams

✓ Works with [GitHub Apps](#)

Lists the teams that have access to the specified repository and that are also visible to the authenticated user.

For a public repository, a team is listed only if that team added the public repository explicitly.

Personal access tokens require the following scopes:

- `public_repo` to call this endpoint on a public repository
- `repo` to call this endpoint on a private repository (this scope also includes public repositories)

This endpoint is not compatible with fine-grained personal access tokens.

### Parameters for "List repository teams"

#### Headers

**accept** string

Setting to `application/vnd.github+json` is recommended.

## Path parameters

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

## Query parameters

}
```

# Transfer a repository

---

✔ Works with [GitHub Apps](#)

A transfer request will need to be accepted by the new owner when transferring a personal repository to another user. The response will contain the original `owner`, and the transfer will continue asynchronously. For more details on the requirements to transfer personal and organization-owned repositories, see [about repository transfers](#). You must use a personal access token (classic) or an OAuth token for this endpoint. An installation access token or a fine-grained personal access token cannot be used because they are only granted access to a single account.

## Parameters for "Transfer a repository"

### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

### Path parameters

---

**owner** string **Required**

The account owner of the repository. The name is not case sensitive.

**repo** string **Required**

The name of the repository without the `.git` extension. The name is not case sensitive.

### Body parameters

---

**new\_owner** string **Required**

The username or organization name the repository will be transferred to.

**new\_name** string

The new name to be given to the repository.

**team\_ids** array of integers

ID of the team or teams to add to the repository. Teams can only be added to organization-owned repositories.

## HTTP response status codes for "Transfer a repository"

Status code	Description
202	Accepted

```

## Response

Status: 204

## Create a repository using a template

---

Creates a new repository using a repository template. Use the `template_owner` and `template_repo` route parameters to specify the repository to use as the template. If the repository is not public, the authenticated user must own or be a member of an organization that owns the repository. To check if a repository is available to use as a template, get the repository's information using the [Get a repository](#) endpoint and check that the `is_template` key is `true`.

### OAuth scope requirements

When using [OAuth](#), authorizations must include:

- `public_repo` scope or `repo` scope to create a public repository
- `repo` scope to create a private repository

### Parameters for "Create a repository using a template"

#### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

#### Path parameters

---

**template\_owner** string **Required**

The account owner of the template repository. The name is not case sensitive.

---

**template\_repo** string **Required**

The name of the template repository without the `.git` extension. The name is not case sensitive.

---

#### Body parameters

---

**owner** string

The organization or person who will own the new repository. To create a new repository in an organization, the authenticated user must be a member of the specified organization.

**name** string **Required**

The name of the new repository.

**description** string

A short description of the new repository.

**include\_all\_branches** boolean

Set to `true` to include the directory structure and files from all branches in the template repository, and not just the default branch. Default: `false`.

Default: `false`

**private** boolean

Either `true` to create a new private repository or `false` to create a new public one.

Default: `false`

## List public repositories

---

✓ Works with [GitHub Apps](#)

Lists all public repositories in the order that they were created.

Note:

- For GitHub Enterprise Server, this endpoint will only list repositories available to all users on the enterprise.
- Pagination is powered exclusively by the `since` parameter. Use the [Link header](#) to get the URL for the next page of repositories.

### Parameters for "List public repositories"

#### Headers

---

**accept**    string

Setting to `application/vnd.github+json` is recommended.

## Query parameters

**since** integer

A repository ID. Only return repositories with an ID greater than this ID.

## HTTP response status codes for "List public repositories"

Status code	Description
-------------	-------------

200	OK
-----	----

304	Not modified
-----	--------------

## Code samples for "List public repositories"

```
GET /repositories
```

## List repositories for the authenticated user

---

Lists repositories that the authenticated user has explicit permission ( `:read` , `:write` , or `:admin` ) to access.

The authenticated user has explicit permission to access repositories they own, repositories where they are a collaborator, and repositories that they can access through an organization membership.

### Parameters for "List repositories for the authenticated user"

#### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

#### Query parameters

---

**visibility** string

Limit results to repositories with the specified visibility.

Default: `all`

Can be one of: `all` , `public` , `private`

---

**affiliation** string

Comma-separated list of values. Can include:

- `owner` : Repositories that are owned by the authenticated user.
- `collaborator` : Repositories that the user has been added to as a collaborator.
- `organization_member` : Repositories that the user has access to through being a member of an

organization. This includes every repository on every team that the user is on.

Default: `owner,collaborator,organization_member`

---

**type** string

Limit results to repositories of the specified type. Will cause a `422` error if used in the same request as **visibility** or **affiliation**.

Default: `all`

Can be one of: `all` , `owner` , `public` , `private` , `member`

---

**sort** string

The property to sort the results by.

Default: `full_name`

Can be one of: `created` , `updated` , `pushed` , `full_name`

---

**direction** string

The order to sort by. Default: `asc` when using `full_name` , otherwise `desc` .

Can be one of: `asc` , `desc`

---

**per\_page** integer

The number of results per page (max 100).

Default: `30`

---

**page** integer

Page number of the results to fetch.

Default: `1`

---

**since** string

Only show repositories updated after the given time. This is a timestamp in [ISO 8601](#) format: `YYYY-MM-DDTHH:MM:SSZ` .

---

**before** string

Only show repositories updated before the given time. This is a timestamp in [ISO 8601](#) format: `YYYY-MM-DDTHH:MM:SSZ` .

## Create a repository for the authenticated user

---

Creates a new repository for the authenticated user.

### OAuth scope requirements

When using [OAuth](#), authorizations must include:

- `public_repo` scope or `repo` scope to create a public repository
- `repo` scope to create a private repository

### Parameters for "Create a repository for the authenticated user"

#### Headers

---

**accept** string

Setting to `application/vnd.github+json` is recommended.

#### Body parameters

---

**name** string **Required**

The name of the repository.

---

**description** string

A short description of the repository.

---

**homepage** string

A URL with more information about the repository.

**private** boolean

Whether the repository is private.

Default: `false`

---

**has\_issues** boolean

Whether issues are enabled.

Default: `true`

---

**has\_projects** boolean

Whether projects are enabled.

Default: `true`

---

**has\_wiki** boolean

Whether the wiki is enabled.

Default: `true`

---

**has\_discussions** boolean

Whether discussions are enabled.

Default: `false`

---

**team\_id** integer

The id of the team that will be granted access to this repository. This is only valid when creating a repository in an organization.

---

**auto\_init** boolean

Whether the repository is initialized with a minimal README.

Default: `false`

---

**gitignore\_template** string

The desired language or platform to apply to the `.gitignore`.

---

**license\_template** string

The license keyword of the open source license for this repository.

---

**allow\_squash\_merge** boolean

Whether to allow squash merges for pull requests.

---

Default: `true`

---

**allow\_merge\_commit** `boolean`

Whether to allow merge commits for pull requests.

Default: `true`

---

**allow\_rebase\_merge** `boolean`

Whether to allow rebase merges for pull requests.

Default: `true`

---

**allow\_auto\_merge** `boolean`

Whether to allow Auto-merge to be used on pull requests.

Default: `false`

---

**delete\_branch\_on\_merge** `boolean`

Whether to delete head branches when pull requests are merged

Default: `false`

---

**squash\_merge\_commit\_title** `string`

The default value for a squash merge commit title:

- `PR_TITLE` - default to the pull request's title.
- `COMMIT_OR_PR_TITLE` - default to the commit's title (if only one commit) or the pull request's title (when more than one commit).

Can be one of: `PR_TITLE` , `COMMIT_OR_PR_TITLE`

---

**squash\_merge\_commit\_message** `string`

The default value for a squash merge commit message:

- `PR_BODY` - default to the pull request's body.
- `COMMIT_MESSAGES` - default to the branch's commit messages.
- `BLANK` - default to a blank commit message.

Can be one of: `PR_BODY` , `COMMIT_MESSAGES` , `BLANK`

---

**merge\_commit\_title** `string`

The default value for a merge commit title.

- `PR_TITLE` - default to the pull request's title.
- `MERGE_MESSAGE` - default to the classic title for a merge message (e.g., Merge pull request #123

from branch-name).

Can be one of: PR\_TITLE , MERGE\_MESSAGE

---

**merge\_commit\_message** string

The default value for a merge commit message.

- PR\_TITLE - default to the pull request's title.
- PR\_BODY - default to the pull request's body.
- BLANK - default to a blank commit message.

Can be one of: PR\_BODY , PR\_TITLE , BLANK

---

**has\_downloads** boolean

Whether downloads are enabled.

Default: true

---

**is\_template** boolean

Whether this repository acts as a template that can be used to generate new repositories.

Default: false
